**INSTALLATION  
ON GRASS**

STEPPING STONE

**LAYING SYSTEM**

**INSTALLATION  
 ON GRASS**

The ideal laying solution for creating walkways, barbecue areas and gazebos in the garden: by laying EVO\_2/e™ slabs on the ground, you can preserve the underlying lawn, preventing it from being damaged by weights or heavy foot traffic.

The range is also suitable for creating public and residential walkways and outdoor areas.

**HOW TO LAY  
 "JAPANESE  
 STEPPING STONES"**

To create a path pattern arranging the slabs in the "Japanese stepping stone" style, you need to calculate the number of steps needed to complete the path, then space the slabs at an equal distance along the route. To ensure perfect stability, dig down 5-8 cm (2"-3"), add fine gravel - size 3 to 6 mm (1/8" to 1/4"), and compact down before laying the slab. The slabs must not protrude above the lawn level, in order not to damage the lawnmower when cutting the grass.

The proposed diagrams and indications are purely indicative of the type of application: please refer to the specific regulations in force in your country in order to lay the floor to the highest technical standards.

For any information and/or suggestion concerning EVO\_2/e™ laying system installation, please refer to the specific manual EVO\_2/e™.
